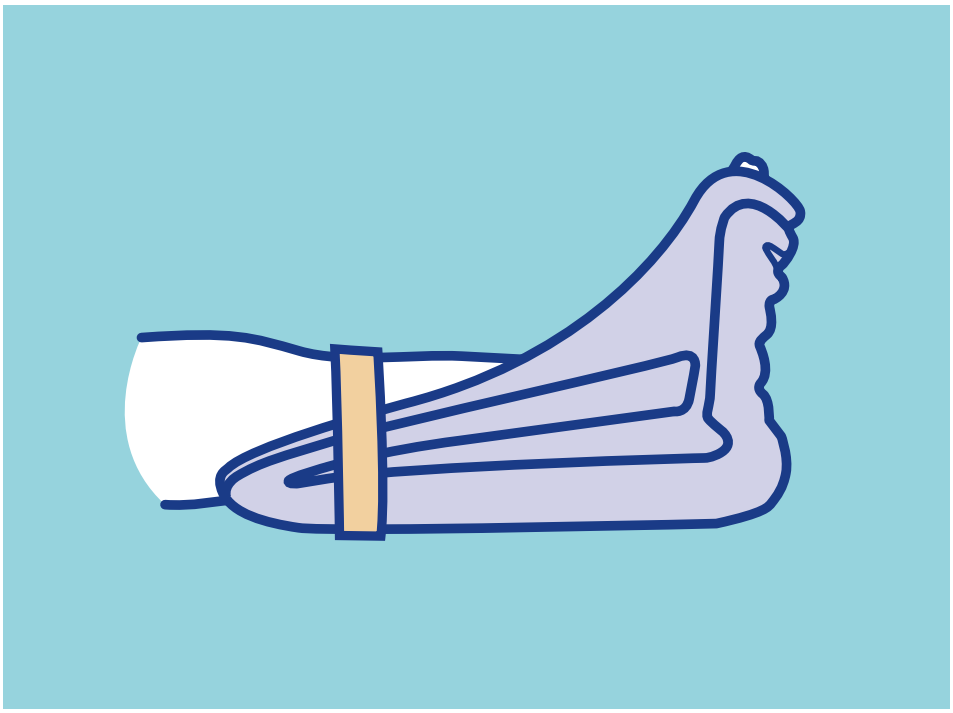
Max - The pressure relieving heel lifter



Product description

The heel lifter is designed to give complete heel relief. The heel lifter is shaped to fit the Achilles tendon, with height that supports the foot.

The ergonomic design of the heel lifter ensures stability without hindering the patient's movements.

Even with the slightest movement, the heel lifter will stimulate the microcirculation of the skin, which optimises circulation.

These properties make Heel Up® an optimal heel lifter when the bedridden patient needs a comfortable and pressure-relieving support surface.

Heel Up® is made of non-woven material, which makes the heel lifter soft, skin-friendly, heat and moisture absorbent and comfortable with optimal pressure relief.

Advantages

- Designed for the prevention and treatment of pressure ulcers in the heel region
- Single-use ensures high hygiene
- Easy to use. Heel Up® is inflated before use and adjusted to fit the individual user's anatomy and needs
- Good comfort. Soft, skin-friendly, heat and moisture-absorbent material
- The products eliminate the need for handling in a reuse depot and free up treatment resources
- Supplied in clean, sealed flat packaging including an inflation device
- Takes up minimal space in the storage area
- Tested and approved in accordance with ISO 10993-10:2010 skin irritation and sensitisation
